

Comprehensive Nutrient Management

A comprehensive nutrient management conservation activity plan is a site-specific strategy to help a landowner protect soil, water, and air quality on production and land treatment areas.

NRCS Technical Service Providers (TSPs) prepare these plans using inputs such as:

- Assessments of existing and planned manure and waste water handling and storage systems
- Soil and risk assessment analyses
- Evaluations of land treatment practices
- Assessments of farmstead safety and security

- Evaluations of farm and field nutrient balances
- Recordkeeping

Conservation practices recommended in such a plan can include:

- Diversion
- Feed management
- Waste treatment lagoon
- Waste storage facility
- Roof runoff structures
- Manure transfer
- Subsurface drain
